## Iris expander ring

<i>Brand name</i>	<b>CANABRAVA RING</b>
<i>Reference</i>	<b>CANA - RING</b>
<i>Description and Indications</i>	<p>An iris expander ring designed to safely expand the iris in order to simplify phacoemulsification, as well as surgeries in which the pupil does not dilate properly using pharmaceuticals. It provides a pupillary opening of 6.3mm and keeps dilation stable during surgery, improving the surgeon's access and field of vision.</p> <ul style="list-style-type: none"> <li>• 300° semicircular ring with a 60° opening made from a single piece.</li> <li>• Does not require an injector.</li> <li>• Easy to adapt and remove.</li> <li>• The ring can be inserted in incisions smaller than 2 mm.</li> <li>• Easy to insert in pupils smaller than 4.5 mm and in shallow chambers.</li> <li>• Optimum visibility.</li> <li>• Disposable device that cannot be re-sterilized.</li> </ul> <p><u>Indications:</u></p> <ul style="list-style-type: none"> <li>• Myosis.</li> <li>• Coloboma.</li> <li>• Traumatic sector iridectomy.</li> <li>• Intraoperative floppy iris syndrome.</li> <li>• Iris prolapse.</li> <li>• Small pupils.</li> <li>• Rigid iris tissue due to a pseudoexfoliation.</li> <li>• Vitrectomy with small pupils.</li> </ul>
<i>Material</i>	Medical grade Polymethyl Methacrylate (PMMA).
<i>Sterilization method</i>	Ethylene Oxide (ETO).
<i>Packaging</i>	Sterile, single unit.
<i>Shelf-life</i>	4.5 years
